Non-Penetrating Bracket for Standing Seam Roofs

The Roof Rat Bracket is a standing seam metal roofing bracket that was created to give contractors a place to put their foot. Designed specifically for standing seam metal roof systems, the Roof Rat Bracket requires no bolts, set screws or any additional tools for attachment – just your fingers. The patent-pending Roof Rat Bracket easily attaches to the vertical leg of the standing seam metal roofing panel. To use, press open the cam levers and place The Roof Rat Bracket over the seam of the panel. Release the levers and the bracket attaches itself to the seam of the panel. Pull down or step on the bracket and it will automatically tighten against the seam with no negative impact on the seam and or paint finish. The Roof Rat Bracket is made in the United States.
